**DETAILED ACTION**

1. This action is responsive to communication: Application, filed on 11/25/2003.

***Claim Rejections - 35 USC § 101***

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 37 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 37 is rejected under 35 U.S.C. 101 as being directed to nonstatutory subject matter because, this claims contains a software component, however it is a computer software per se. The claims lack the necessary physical articles or objects to constitute a machine or a manufacture within the meaning of 35 USC 101. They are clearly not a series of steps or acts to be a process nor are they a combination of chemical compounds to be a composition of matter. As such, they fail to fall within a statutory category. They are, at best, functional descriptive material *per se*.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-37 rejected under 35 U.S.C. 102(e) as being anticipated by Lindblad et al. (Pub No U.S 2005/0055343) hereinafter “Lindblad”.

For claim 1, Lindblad teaches “a method for parsing documents in query processing, said method comprising: producing at least one index of a document written in a mark-up language; corresponding said index to said document” (See paragraph [0227]) “scanning said document” (See paragraph [0129], [0160], [0174])

Application/Control Number: 10/723,391

Art Unit: 2168

“selectively skipping portions of said document based on instructions from said index”(See paragraph [0107])

For claim 2, Lindblad teaches “wherein said mark-up language comprises any of HTML and XML” (See paragraph [0007]-[0009], [0031-0032])

For claim 3, Lindblad teaches “wherein the skipped portions of said document comprise portions irrelevant to said query”(See paragraph [01029], [0107])

For claim 4, Lindblad teaches “wherein said index comprises a plurality of elements representing textual categories of said query” (See paragraph [0082]-[0227])

For claim 5, Lindblad teaches “wherein said instructions match said elements to said query” (See paragraph [0082]-[0227])

For claim 6, Lindblad teaches “wherein if said elements do not match said query, then said parser uses said index to skip the portions of the document corresponding to unmatched elements” (See paragraph [0129]-[0107])

For claims 7 and 8, Lindblad teaches “wherein said each of said elements corresponds to a position ...”(See paragraph [0008-0009]-[0031], [0157-0158])

Application/Control Number: 10/723,391

Art Unit: 2168

For claim 9, Lindblad teaches “wherein said index uses said end position as a marker for determining where to resume scanning said document upon skipping said portions of said document” (See paragraph [0129], [0174])

For claim 10, Lindblad teaches “wherein said elements comprise sub-elements representing textual sub-categories of said query”(See paragraph [0082]-[0227])

For claim 11, Lindblad teaches “wherein said sub-elements updates said position in said document upon skipping said portions of said document and resuming scanning of said document”(See paragraph [0129], [0174])

For claims 12, Lindblad teaches “saving said textual categories into a buffer”(See paragraph [0082], [0104], [0130], [0226], [0083]).

For claims 13-24, these claims are rejected on grounds corresponding to the arguments given above for rejected claims 1-12 and are similarly rejected.

For claims 25-36, these claims are rejected on grounds corresponding to the arguments given above for rejected claims 1-12 and are similarly rejected.

For claim 37, this claim is rejected on grounds corresponding to the arguments given above for rejected claim 1 and is similarly rejected.
